

Asbestos & Lead Abatement Services

ASBESTOS ABATEMENT

Asbestos was once revered as the “miracle mineral” and was incorporated in building materials such as:

- ★ Electrical Components
- ★ Ceiling Tiles
- ★ FloorTile
- ★ Mastic
- ★ Boiler Insulation
- ★ Laboratory Countertops
- ★ Fireproofing
- ★ Joint Compounds
- ★ Pipe Insulation

Within a brief period of time, asbestos had been connected to causing lung cancer, mesothelioma, and asbestosis (a crippling and deadly respiratory ailment). As these components become damaged, people are faced with the responsibility of fixing the potential health hazard. This is when our company’s services are required.

Our personnel undergo extensive training to learn the latest techniques and procedures used in the asbestos abatement industry. These practices include state-of-the-art equipment and the most updated abatement techniques. Safety, health, and the protection of the environment during the removal process are vital to all successful projects.

We take pride in exceeding strict EPA and OSHA standards and regulations in all areas of operation. With H.S.I., you can be assured of thorough and quality work, from the initial consultation to the disposal of the materials.

LEAD ABATEMENT

National attention to the dangerous affects of lead effecting health has made us aware of a problem which can no longer be ignored. Everyone is susceptible to lead poisoning, with the most vulnerable group being young children. Lead can be found almost anywhere.

Among the most common:

- ★ Paint Debris
- ★ Water Pipes
- ★ Ceramic Glazes
- ★ Building Components

H.S.I. uses chemical and mechanical methods of lead paint removal. Most often, the removal of the building component and replacement is the best method. Our employees have carpentry skills and experience, which is essential in the replacement of building components.

H.S.I.’s trained personnel have experience in abating lead from homes, commercial buildings and industrial sites. Our experience includes both renovations and restorations of these sites. The professionalism at H.S.I. will ensure the safety and protection of your home, business and the environment during the abatement process.

Horsley Specialties, Inc. is State and EPA certified with 30+ years of axperience in asbestos, lead paint, and other environmental remediation services.
