

Mold/Environmental Remediation & Selective Demolition Services

SELECTIVE DEMOLITION

Horsley Specialties, Inc. (HSI) services include interior and exterior demolition of commercial and industrial buildings for public agencies and facility owners. Our interior demolition services are typically performed in conjunction with our asbestos abatement services, but they may be standalone projects. We are highly committed to be environmentally conscious of what gets recycled versus what goes to the landfill. HSI's knowledge, experience and highly capable management, can successfully complete any interior or exterior demolition project regardless of the size or complexity.

MOLD REMEDIATION

Legionnaire's Disease brought the importance of Mold remediation to the spotlight in the late 70's and recently problems for the Gulf of Mexico to Canada have been in the national spotlight. Horsley Specialties, Inc. was introduced to the microbial remediation market in the spring of 1997 when the Red River of North Dakota rose approximately 35 feet above flood stage, devastating Grand Forks and the surrounding area. In the aftermath, numerous institutions needed immediate remediation before they could be reoccupied. These facilities included schools, commercial and institutional properties. Horsley Specialties, Inc. played a major role in returning these disaster stricken properties to occupancy. H.S.I. specializes in structural and HVAC mold decontamination of commercial office buildings, universities, industrial facilities and hospitals. We are ACAC and IICRC-WRT and state certified.
